Millennials, Boomers and Planning for Housing

Stephen Levy, CCSCE SCAG/USC Demographic Workshop June 1, 2015

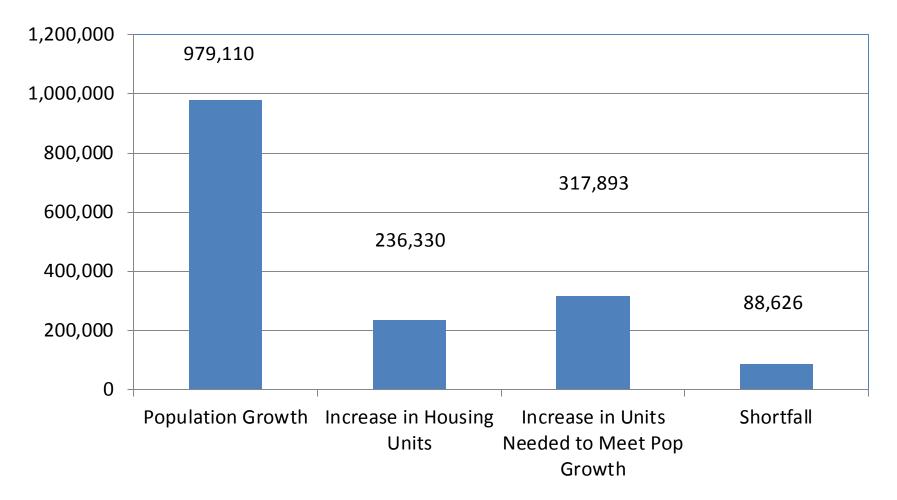

# Some Data, Some Implications

- Boomers dominate the region's population growth
- The region has accumulated a large housing shortage and current building remains below the level needed to keep pace with job and population growth.
- If you take one set of words away from this meeting let it be
- **REGIONAL HOUSING SHORTAGE**

## SCAG Region Population Growth 2015-2025

## Anatomy of a Regional Housing Shortage 2007-2014

#### Implications--Boomers

- A high percentage of boomers own homes. What will they do as they age?
- --stay put, surveys show this but it is hard for boomers to anticipate how they will feel ten years from now
- --downsize in their communities (we did)
- --Move away, few actually do this nowadays

## Implications--Boomers

- If boomers downsize in/near their communities, that will open up homes to new families and vice versa.
- From a regional perspective, downsizing to areas near services, shopping and transit is the best option for housing, transportation and the environment
- What needs to be done to make this possible and attractive? What is SCAG's role?

# Implications--Millennials

- How strong is the preference for living in/near a "happening" area?
- Is living with parents going to continue as strong as today?
- How small can housing be if it is in attractive areas?

# **Bottom Line for Housing**

- A shortage at all levels
- Future need at all levels—for aging boomers, for young families, for more subsidized housing
- One trend is certain—more new housing will be in multi-family buildings
- One trend is possible—more housing in or near the region's downtowns, especially those with transit opportunities.
